

Here's a look at what's coming soon and what's recently launched.

You will see all of these updates in your workspace no later than 9/16/2020

TL;DR – New Features in your Workspace - Log in NOW to see what's new!

Faster Workflow - We've simplified the daily workflow, you no longer need to set and publish priorities on a separate page. Everything can now be done directly from the My Work page.

Simplified Planning

- **Find Tasks Faster** – the update sidebar simplifies searching and finding
- **Themes** – set multi-day goals
- **Plan for Multiple Days** – plan a week in advance

Slack Integration

- **Trenobot** – query Treno data directly from within Slack

Performance

- **GitHub Webhooks** – receive code repository updates in real-time

SIMPLIFIED PLANNING

Find Tasks Faster

We've simplified how to find tasks and add priorities to your day. Everything you need is behind the  . The sidebar now presents an individualized, curated list of the (up to 150) most relevant work items for you. You can sort these items by priority (our view of the most important items, or by creation date, or title). The updated sidebar also contains a universal search, that will search ALL items (not just the top 150) found in your connected systems and present results.

The sidebar also contains the  **Create Item** button that creates new work items – work that isn't contained in any other system. Additionally, from the sidebar, you can create and add Themes (see below) to your priorities.

Themes

A Theme in Treno can be used to denote a goal, grouping of tasks or a large body of work that will be delivered over multiple days. Themes are created with a title, description, and an optional success measurement. And once created, they are available for all users to add to their priorities. You can set the

duration of a theme (which is how many days you want it to automatically appear in your daily plans) when you add it to your daily priorities.

Themes are great to use when you have a goal, but don't yet know all of the tasks that will be needed to complete the goal. For example, you could add "Work on Bugs" or "Prepare updated documentation" as a theme to your priorities – and by doing so you've let your teammates know the type of work you will be doing – even if you don't list actual tasks. Themes are also an excellent way for managers and engineers to agree on weekly objectives and deliverables.

Plan for Multiple Days (in advance)

Now you can set your delivery priorities in advance for an entire week. Planning ahead has never been so easy. From the My Work page, simply select the day(s) you want to plan and then add tasks and themes as normal. We will automatically save everything and make your plans visible to your teammates. But have no fear, you can edit advance plans at any time.

SLACK INTEGRATION

Slackbot (requires Slack integration)

Our slackbot is a chatbot that allows you to query Treno information directly from within the Slack interface. From within Slack, using `/treno <command>` users can pull data directly from Treno. You can see all items that are blocked, priorities from any user, any request for help or open pull requests...and you can even file a bug report. To learn more, go to slack and type `"/treno help"`.

Only visible to you

Treno APP 12:17 PM

Treno commands and their usage

blocked

View blocked items, optionally filtered by user.

```
/treno blocked
```

```
/treno blocked @jdoe
```

bug

File a bug-report.

```
/treno bug <Description>
```

reviews

View open PRs for code-review.

```
/treno reviews
```

blockers

View impediments, or items blocking other items, optionally filtered by user.

```
/treno blockers
```

```
/treno blockers @jdoe
```

requests

View open assistance requests, optionally filtered by user.

```
/treno requests
```

```
/treno requests @jdoe
```

today

View your priorities for today, or another user's

```
/treno today
```

```
/treno today @jdoe
```

PERFORMANCE

GitHub Webhooks (requires GitHub integration)

Webhooks will allow us to detect, in near-real time, any changes in the connected GitHub code repositories. This allows Github Pull Requests, comments, and merges to show almost immediately.

Even more exciting updates are coming next week!!!
